

Manual - Web Page Builder

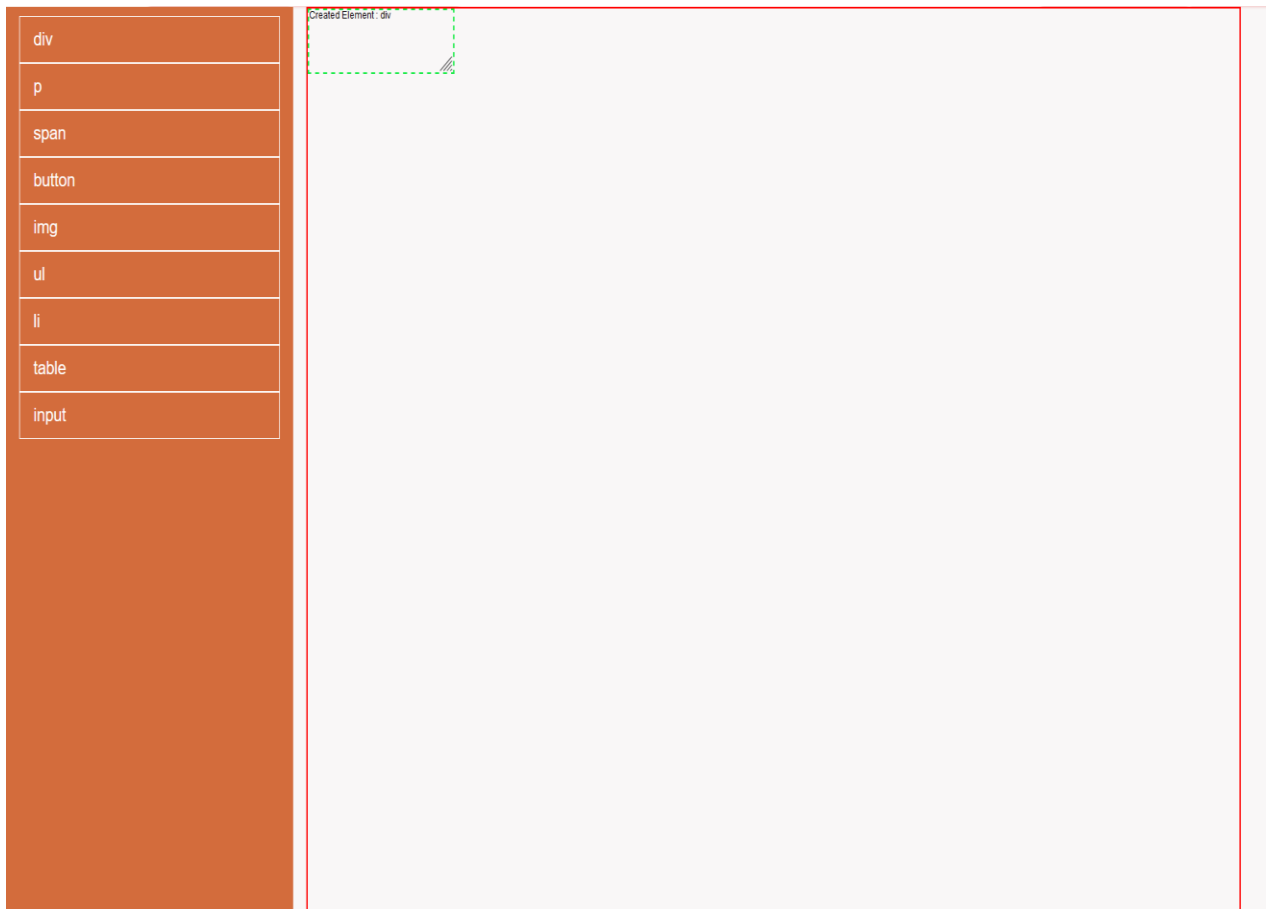

1. The left side are the available options and elements that you can use to build your page.

The area inside the red box is the view area of your webpage. This is where you will be building your web page.

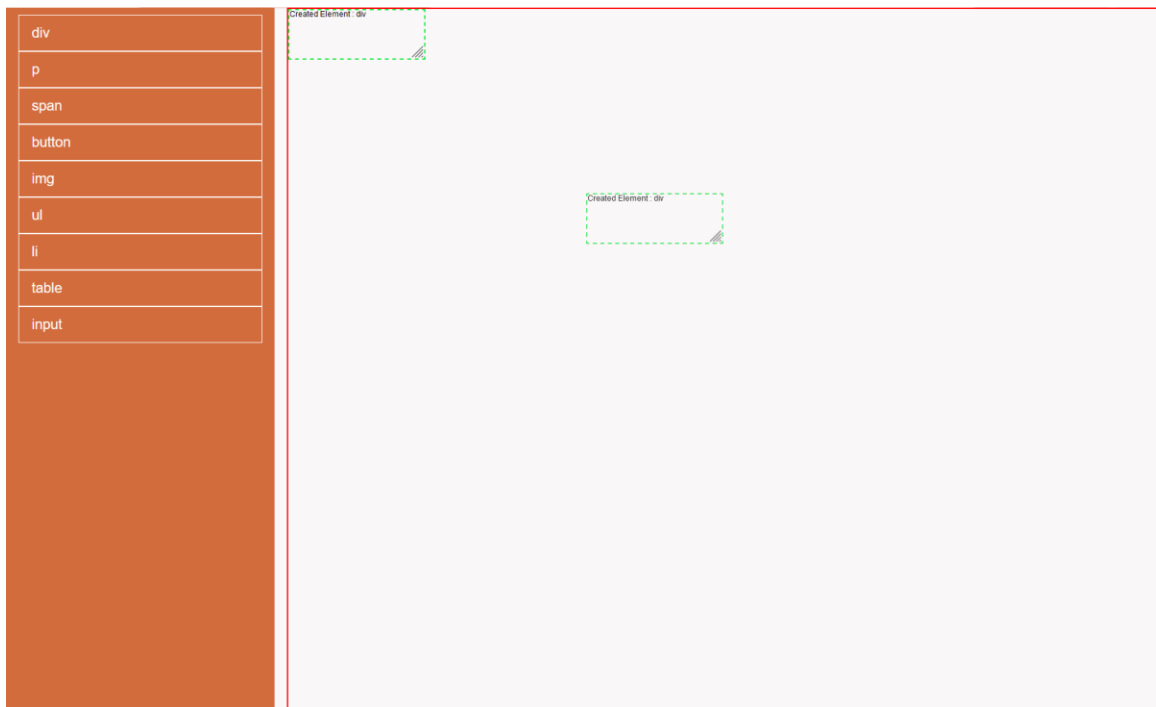

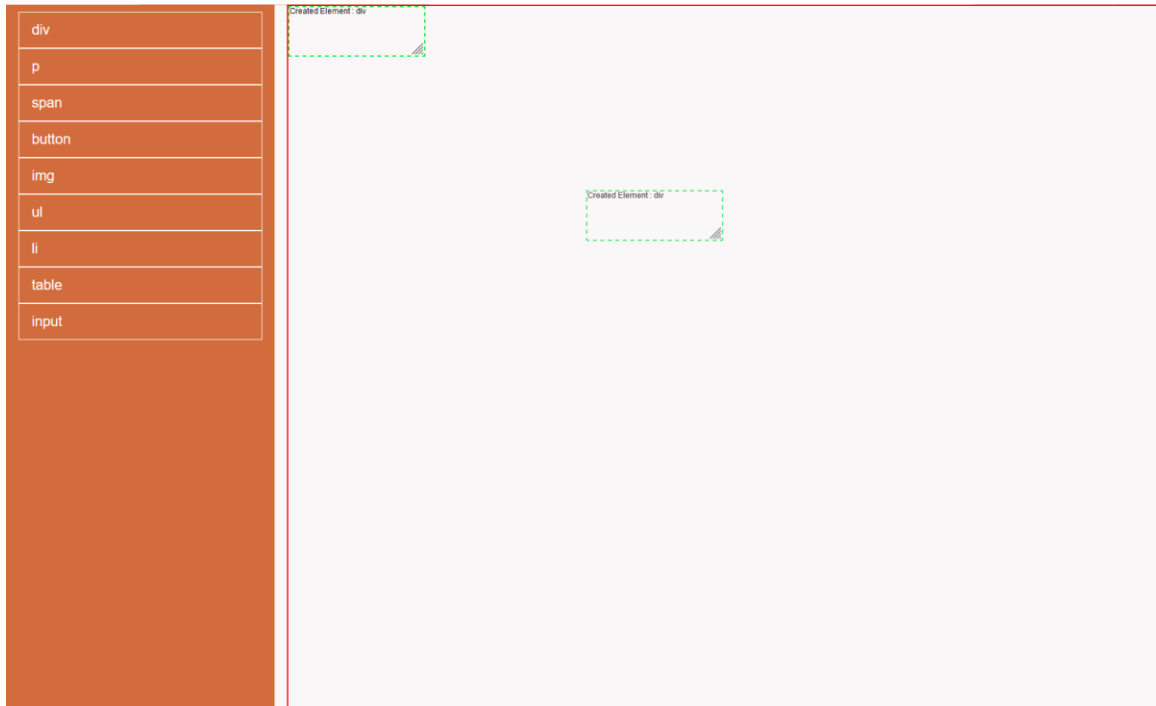

- Click on the element you want on the left sidebar. Then a corresponding view will appear for that element inside the red box with green boundary.

For example: In the scenario below, element 'div' was clicked, so a dotted-box with div appears in the screen.

3. Click and hold on the element to drag it anywhere inside the red box.

4. To edit the content of an element, right-click on it. Then an edit form as shown below will appear on the screen.

For example: The element 'div' created in (2) is being edited in the given scenario.

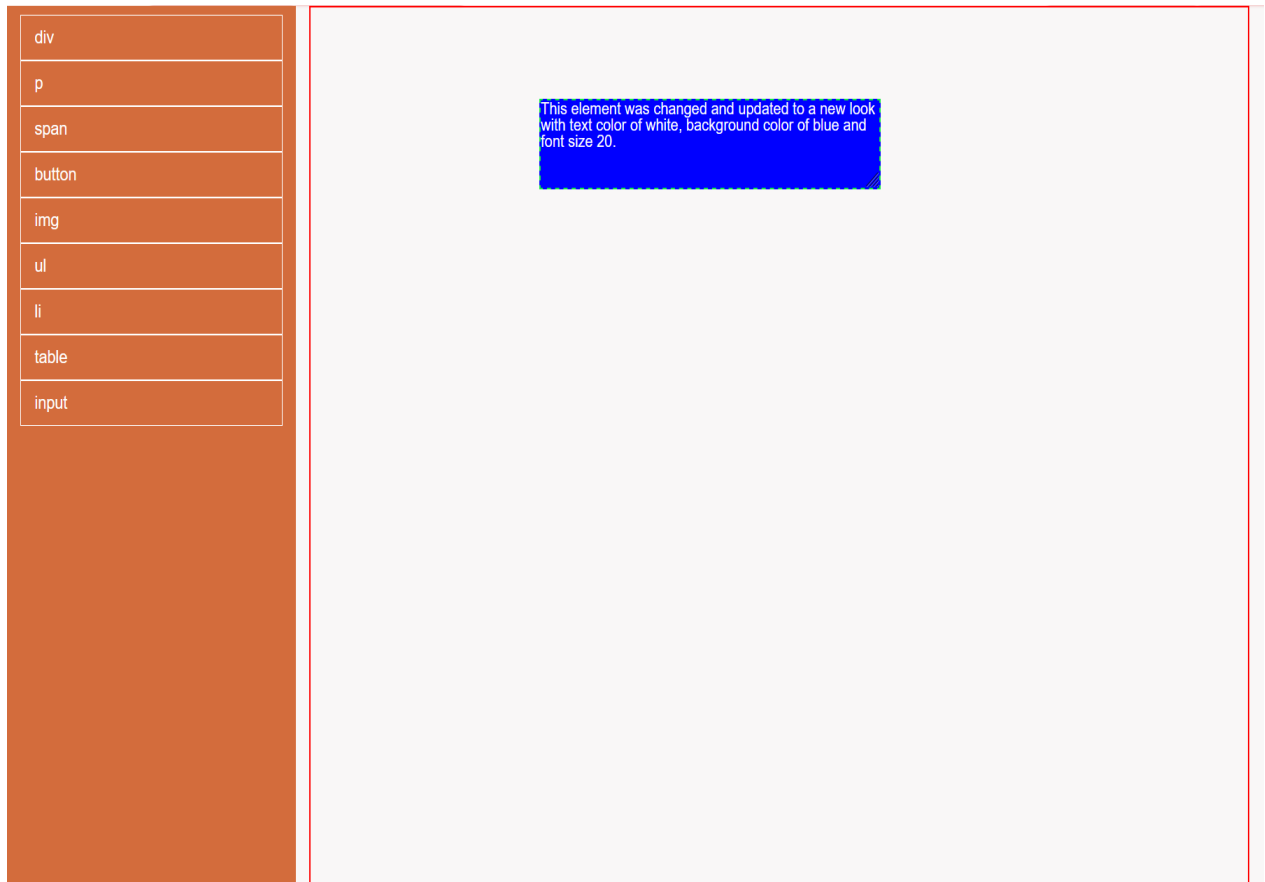

On right-clicking an element, a view similar to below will appear where you can change the content inside of an element or its design itself.

* The inner content of an element can be either text or HTML syntax as well.

The image shows a web editor interface. On the left is a vertical sidebar with a list of HTML elements: div, p, span, button, img, ul, li, table, and input. The 'div' element is selected. To the right of the sidebar is a large dark gray area representing the element being edited. At the top of this area, a white box contains the text 'Created Element : div'. Below this, there are several settings: 'Background Color' with a color picker, 'Text Color' with a color picker, 'Font Size' with a text input, 'Width of this element' with a text input showing '211px', 'Height of this element' with a text input showing '78px', and 'URL of background image (leave empty for no bg image)' with a text input. At the bottom of the settings area is a white button labeled 'Update'.

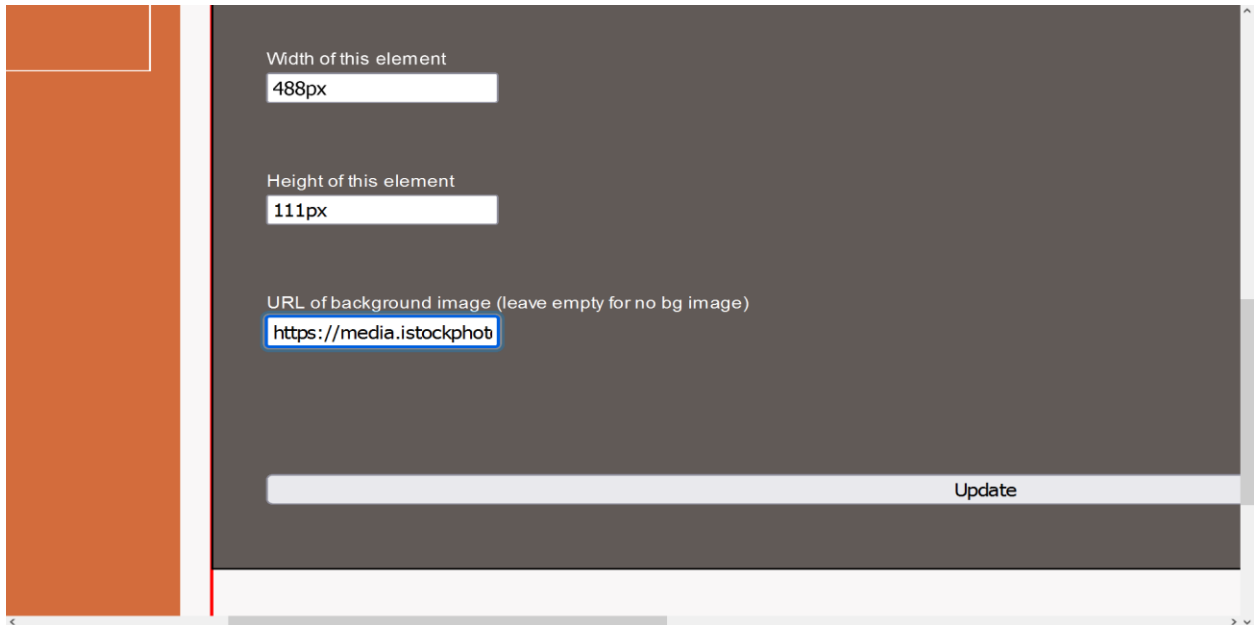

5. After making appropriate changes, click on ‘Update’ to implement new changes.

* If you right-click an element respectively but don’t want to change anything, just click on the update button without changing any values inside the form.

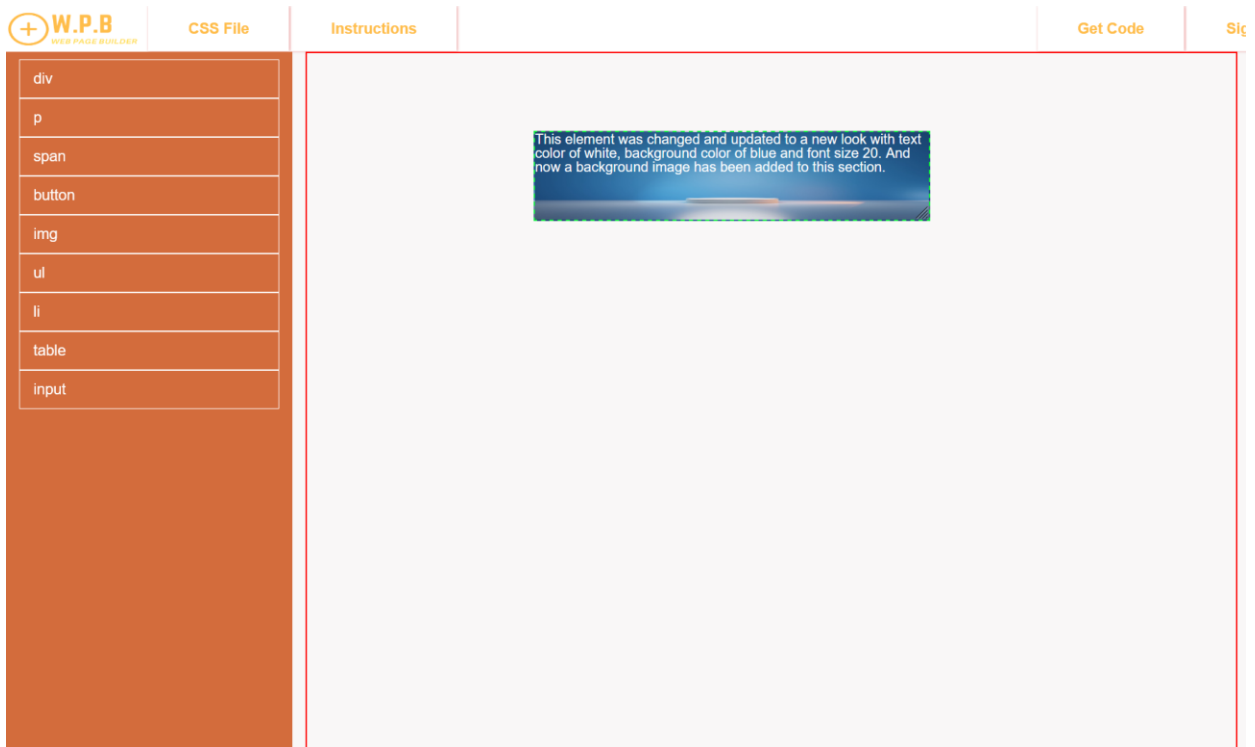

6. To use a background image for an element, paste the URL of the image inside the `URL of background image` section.

In case you don't want any background image, simply clear the `URL of background image` section or put `none` inside it.

The screenshot shows the settings panel for an element in the W.P.B. Web Page Builder. On the left is a vertical orange bar representing the element. The settings panel on the right has a dark gray background and contains the following fields:

- Width of this element**: A text input field containing "488px".
- Height of this element**: A text input field containing "111px".
- URL of background image (leave empty for no bg image)**: A text input field containing "https://media.istockphoto".
- Update**: A light gray button at the bottom right of the settings panel.

The screenshot shows the main interface of the W.P.B. Web Page Builder. At the top, there is a navigation bar with the following tabs: "W.P.B. WEB PAGE BUILDER", "CSS File", "Instructions", "Get Code", and "Sig". On the left side, there is a vertical orange bar containing a list of HTML elements: "div", "p", "span", "button", "img", "ul", "li", "table", and "input". The main area on the right is a large white canvas. In the center of the canvas, there is a small rectangular preview of the updated element. The preview shows a blue background with a white text box containing the following text: "This element was changed and updated to a new look with text color of white, background color of blue and font size 20. And now a background image has been added to this section."
