

## Manual - Web Page Builder

1. The left side are the available options and elements that you can use to build your page.

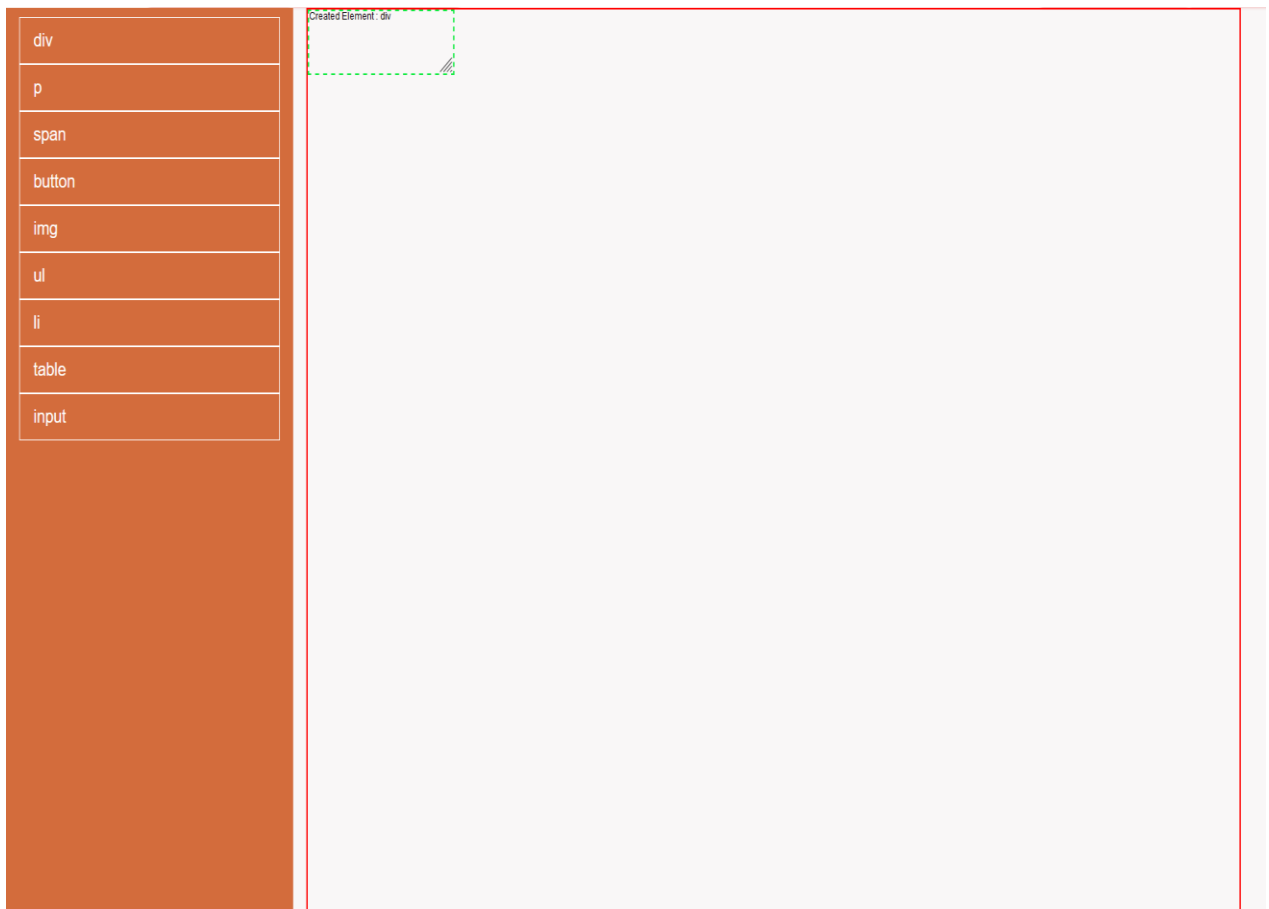

The area inside the red box is the view area of your webpage. This is where you will be building your web page.

By default, a theme is selected for users. Click on `Clear Page` to remove it.

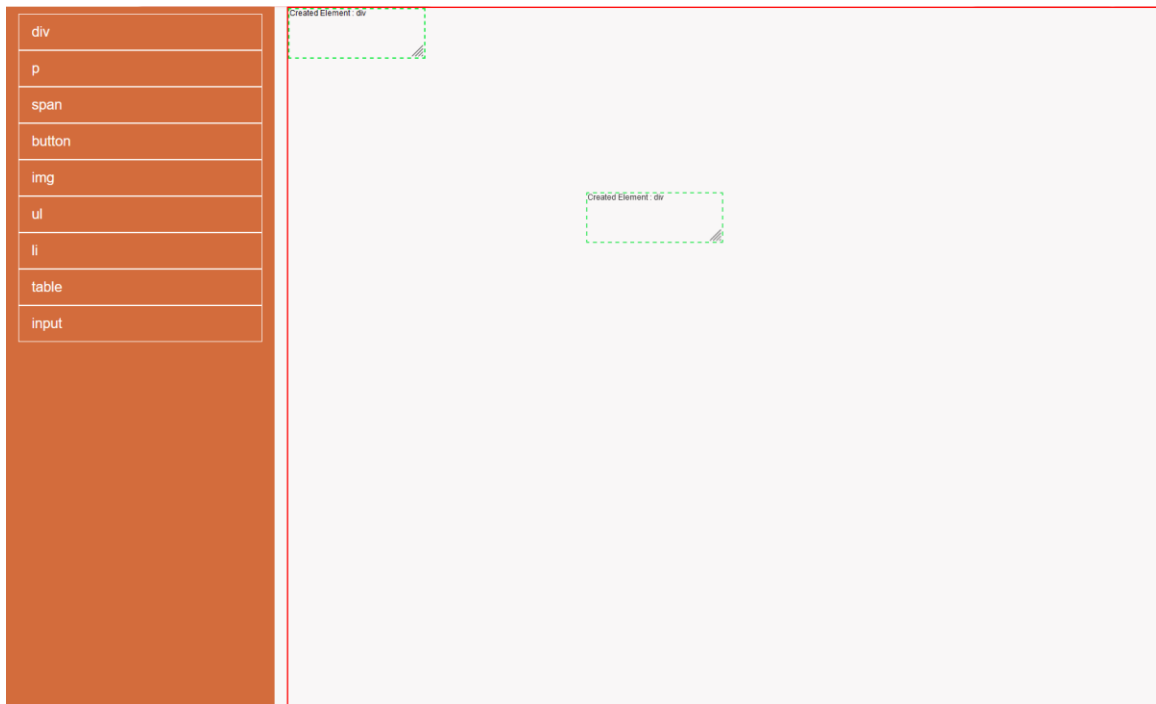

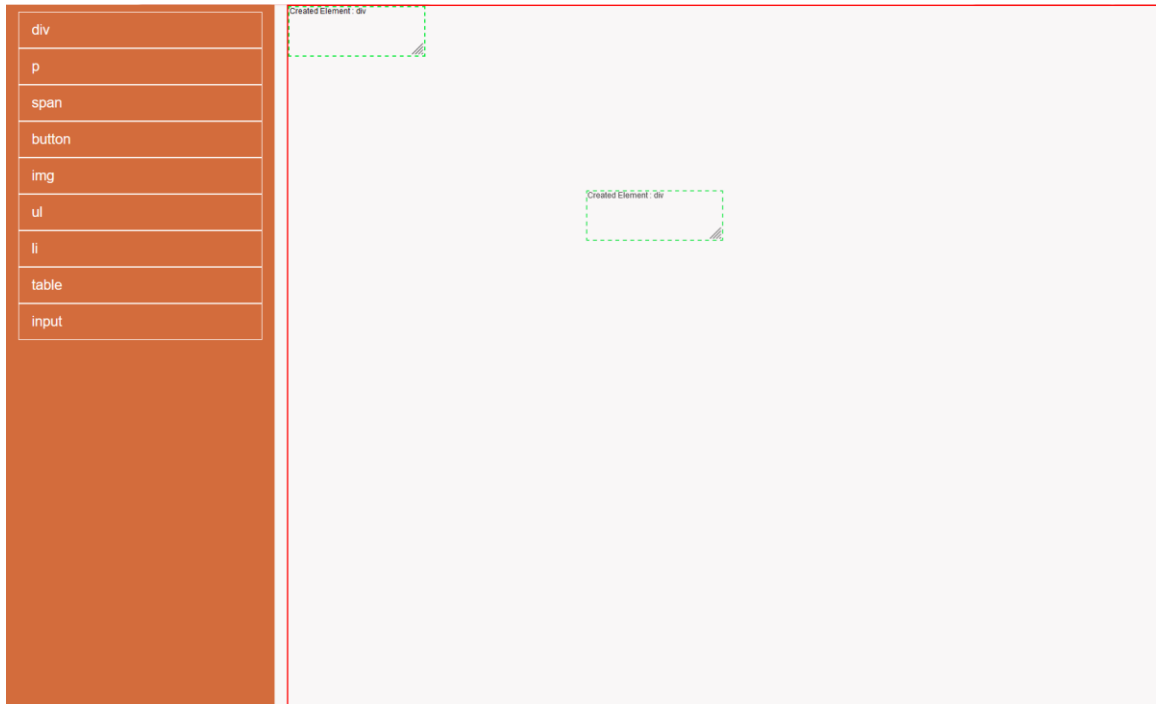

2. Click on the element you want on the left sidebar. Then a corresponding view will appear for that element inside the red box with green boundary.

For example: In the scenario below, element 'div' was clicked, so a dotted-box with div appears in the screen.

3. Click and hold on the element to drag it anywhere inside the red box.

4. To edit the content of an element, right-click on it. Then an edit form as shown below will appear on the screen.

For example: The element 'div' created in (2) is being edited in the given scenario.

On right-clicking an element, a view similar to below will appear where you can change the content inside of an element or its design itself.

\* The inner content of an element can be either text or HTML syntax as well.

The image shows a user interface for editing web elements. On the left is a vertical list of HTML elements: div, p, span, button, img, ul, li, table, and input. The 'div' element is selected. On the right is a configuration form for the selected 'div' element. The form has a dark background and contains the following fields:

- Created Element : div
- Background Color: A color selection box.
- Text Color: A color selection box.
- Font Size: A text input field.
- Width of this element: A text input field with the value '211px'.
- Height of this element: A text input field with the value '78px'.
- URL of background image (leave empty for no bg image): A text input field.
- Update: A button at the bottom of the form.

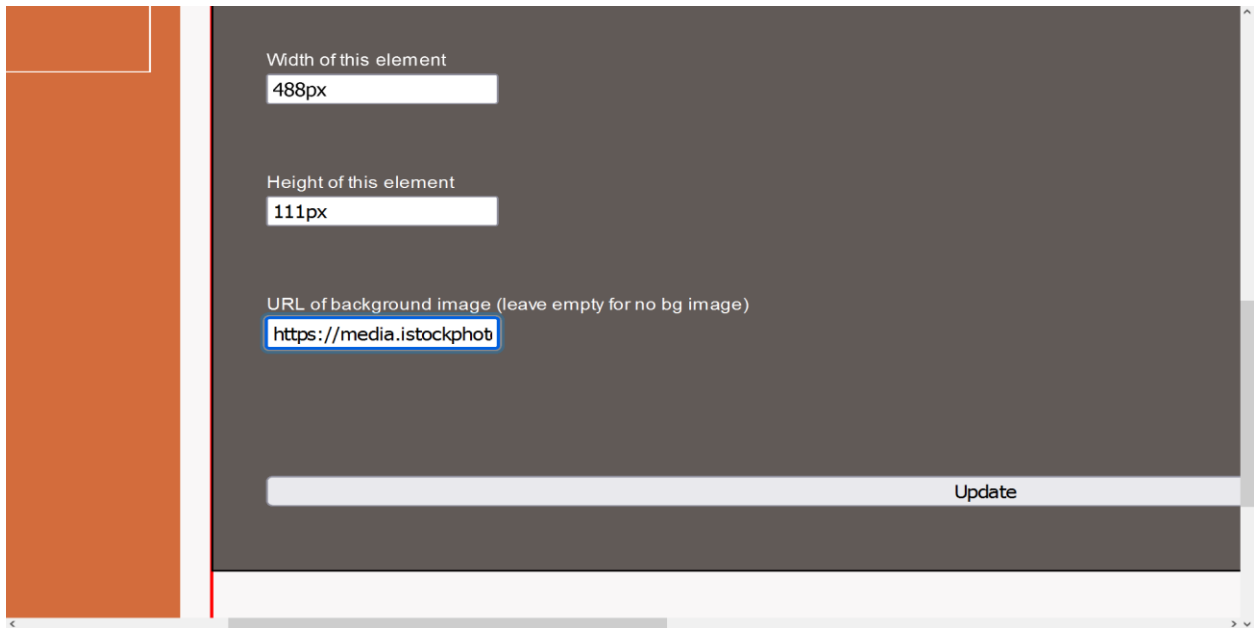

5. After making appropriate changes, click on ‘Update’ to implement new changes.

\* If you right-click an element respectively but don’t want to change anything, just click on the update button without changing any values inside the form.

6. To use a background image for an element, paste the URL of the image inside the `URL of background image` section.

In case you don't want any background image, simply clear the `URL of background image` section or put `none` inside it.

The screenshot shows a web design tool interface. On the left is a vertical orange bar representing a design element. To its right is a settings panel with a dark gray background. The panel contains three input fields: 'Width of this element' with the value '488px', 'Height of this element' with the value '111px', and 'URL of background image (leave empty for no bg image)' with the value 'https://media.istockphoto'. Below these fields is a light gray 'Update' button. The interface includes a horizontal scrollbar at the bottom and a vertical scrollbar on the right side of the settings panel.

Width of this element  
488px

Height of this element  
111px

URL of background image (leave empty for no bg image)  
<https://media.istockphoto>

Update

div

p

span

button

img

ul

li

table

input

This element was changed and updated to a new look with text color of white, background color of blue and font size 20. And now a background image has been added to this section.
